one of the new
liners with A-E-CO
auxiliaries.

A-E-CO Capstan

FROM the days when steam first came into use at sea, the American Engineering Company has been building the machines with which ships are operated. It has led in the application of electric and hydraulic power for the safe, convenient handling of modern craft, from battleship and ocean liner to river towboat. A-E-CO Marine equipment is used on the Seven Seas. Some of these machines and one of the new liners with A-E-CO Auxiliaries are shown here.

123,000 tests a year

In the Crane testing laboratories, the weight arm of a specially designed machine measures the steadily increasing load suspended from a small cylinder of metal. Watching it intently is a man who has at his command instruments that measure to .00005 of an inch. The cylinder begins to yield; he notes the weight. It snaps; he notes the weight. Disengaging it, he measures the stretch and diameter at the breaking point. These tests form a part of the 123,000 determinations Crane Co. makes on its own materials every year.

63,000 of the tests are chemical; not one component from pig iron to limestone flux is charged in

a Crane melting furnace whose suitability has not been determined by analysis. 60,000 are physical; not one hour's melt is drawn off in a Crane foundry whose physical properties—tensile, transverse, and torsional strength, yield point, breaking point, elongation, and reduction of area are not known.

By such exhaustive tests and by researches of scientists in Crane laboratories, a vast body of authoritative data on metals and their properties has been collected. It is embodied in a book, "Pioneering in Science", which is an invaluable reference book for students. On request we will send it to you.

Timken Heavy-Duty Mill Type Quad Bearings 29½" Bore, 46½" outside diameter, 29" width. Capacity 7,000,000 pounds.

Timken Bearings *are* Licking the Toughest Jobs in Industry—Hence *their* Vital Importance to Student Engineers

Sweeping on and up with an irresistible rush, Timken Bearings soar to greater and greater heights of achievement as they are pitted against the toughest jobs that Industry can produce... upsetting all preconceived ideas of production and production costs—revolutionizing anti-friction requirements... brushing aside old theories and traditions to make way for new standards of anti-friction efficiency, economy and endurance.

Terrific pressure loads such as are met in steel rolling mill service—as high as 7,000,000 pounds, are being carried by Timken Bearings in many of the country's largest steel plants.

Hair-breadth accuracy such as is demanded by the finest precision machine tool work is maintained as a matter of regular daily routine.

And thrust and speed and weight and shock—no matter how severe, are handled with equal capability and sureness whether encountered in such widely different types of heavy duty service as automobile operation, paper mills, transcontinental limited trains, oil field equipment or any kind of machinery.

Student engineers of today must be prepared to carry on in industry's war on waste, and they will find "Timken Bearing Equipped" one of their most potent weapons—the modern symbol of protection and saving wherever wheels and shafts turn. The Timken Roller Bearing Co., Canton, Ohio.

TIMKEN *Tapered Roller* BEARINGS

OCTOBER, 1930

This Worthington 2" horizontal duplex piston meter has served fourteen years on ammonium sulphate storage line at the Seaboard By-Product Coke Company, Kearny, N. J.

Each star marks a point in the by-product coke process at which one or more Worthington products can be used to maintain uninterrupted production.

They bought *today's* performance ... *fourteen years ago*

IN 1916, the Seaboard By-Product Coke Company installed this Worthington horizontal duplex piston meter for measuring the passage of ammonium sulphate from settling tank to still.

Today, the meter is still in service, playing an important part in safeguarding production efficiencies. It measures 37½ tons of liquid per day.

This service record is a typical one . . . for Worthington's seventy years of experience in building meters is reflected, in each unit produced, in the ability to function accurately year after year with a minimum of maintenance.

The importance of measuring the fluids involved in industrial processes is sometimes overlooked. A check-up of your liquid handling problems by a Worthington engineer may show you a means of cutting costs.

Taking Electrical Convenience From Ol' Man River

*Join us in the General Electric
program, broadcast every Saturday
evening on a nation-wide N.B.C.
network*

**GENERAL
ELECTRIC**

THE total capacity of waterwheel generators built by General Electric in the last ten years is more than enough to supply light and power for twenty cities of one million population.

Installed in power houses along the waterways, these machines transform the strength of mighty rivers into useful electric energy for homes, for industry, and for transportation.

The vision and skill of college-trained men are largely responsible for the continuing leadership of General Electric in its service of furnishing machines and devices that provide the swift, sure convenience and the economy of electricity — on land and sea and in the air.
